Why a right swipe does not yet submit an application

CyberApply can find a vacancy and save an Apply request. The employer must authorize the separate submission step.

TODAY | FUTURE ROUTE

Employer posts a vacancy
For example, on Greenhouse or Lever.

→ **Public listing is visible**
It includes job details and an application link.

→ **CyberApply shows the job**
The listing becomes a card in Explore.

→ **User swipes right**
CyberApply saves an Apply request.

Does CyberApply have an approved submission connection for this employer?

NO - CURRENT CYBERAPPLY

The employer has not approved a submission connection.

Public access is read-only for CyberApply
A vacancy feed provides the job title, description and link, not permission to submit an application.

The employer controls the submission key
A Greenhouse or Lever administrator creates the private credential for that employer's account.

There is no universal key to buy
A key for one company does not open every company's hiring system.

Paying ourselves would not solve this
No public per-key price is listed; our own ATS subscription would not grant another employer's access.

CyberApply cannot send the CV or answers
The swipe remains an unsent Apply request. Applications must show Needs attention, not Applied.

How to proceed today
Use the original employer application link, or arrange approved employer or partner access.

YES - AFTER AN APPROVED CONNECTION

The employer or an authorized partner has granted access.

Obtain authorized access
An employer approves an integration, or an authorized platform partner supplies a permitted route.

Check candidate materials
Review the CV, name, email, links and candidate facts for this specific vacancy.

Complete the employer's form
Some jobs require extra screening answers or consent that the public job feed does not provide.

Submit from a secure server
Send the CV and answers through the permitted connection; keep the employer key private.

Verify the employer's response
Wait for a successful receipt or application reference. A swipe alone is never proof.

Record the true result
Confirmed: Applied plus receipt. Failed or incomplete: Needs attention with the reason.
